Flash₃ is the perfect solution for applications where it is required to change the backlight color. Additionally, thanks to the integrated lens, it is possible to use the module in installations with a wide range of depths (80mm - 200mm). RGB / CCT driver is required for proper operation. When using more modules, it is necessary to use an RGB / CCT amplifier or driver that will duplicate the signal. Due to the degree of protection IP65, the module can be located in the wet outdoor area. Installation is very easy thanks to the double-sided industrial self-adhesive tape and mounting holes. Flash₃ series modules are powered by 12VDC. Up to 20 modules can be connected in series.
